ALGEBRA FACTORING STUDIO & POLYNOMIAL TILES

Turn Quadratics Into Rectangles: $+x^2$, +x, and +1 Area Tiles

WHAT IS THIS BOX FOR? WHY "X-SQUARED" IS LITERALLY A SQUARE.

Snap the corner rails together, slide in your tiles, and turn scary quadratic equations into a satisfying tabletop jigsaw puzzle!

THE AREA MODEL: MULTIPLYING BY BUILDING RECTANGLES

The area of any rectangle is Width × Height. Our tiles turn algebra expressions into physical shapes you can arrange on your desk:

- **Quadratic Tile (x^2): A big x-by-x square (38.6 × 38.6 mm)**
- **Linear Rod (x): An x-by-1 rectangle (38.6 × 19.0 mm)**
- **Unit Square (1): A 1-by-1 little square (19.0 × 19.0 mm)**

Green = Positive ($+x^2$, +x) | Purple = Negative ($-x^2$, −x) | Yellow/Red = (+1, −1).

CORNER L-RAIL FACTORING FRAME

Snap the two L-rails together on your desk. Arrange your tiles inside the corner into a solid rectangle – then read the factors along the outer edges!

WHAT'S INSIDE YOUR BOX (34 PIECES)

- 30 Algebra Tiles: 2× x^2 squares, 10× x rods, 18× unit squares (+ and −)
- 2× Interlocking Corner L-Rails + 1× Storage Box & Dual-Stage Lid
- Keep this folded guide inside your box lid for examples & part IDs!

★ YOUR FIRST 60 SECONDS WITH THIS BOX START HERE!

1. TEST WHY [+x] IS INCOMMENSURABLE:
Line up Yellow [+1] tiles (19.0mm) along a Green [+x] rod (38.6mm): x is a true variable length!

2. BUILD YOUR FIRST RECTANGLE:
Snap the two Gray L-Rails together and pack 1×[$+x^2$], 5×[+x], and 6×[+1] into a (x+2)(x+3) rectangle.

3. PRESS THE BOX ICON KEY [↱][POLY]:
Press [↱] [POLY] on your SC-32 and enter 1 [A] 5 [B] 6 [C] 0 [D] [EXEC] to find roots −2 and −3!

EQN

BOX ICON = CALCULATOR [↱][EQN] & [↱][POLY] QUADRATIC SOLVER

The button icon embossed on your box lid (left) is the exact calculator key ([↱][EQN] & [↱][POLY])! Build every lesson with your blocks, then press the key.

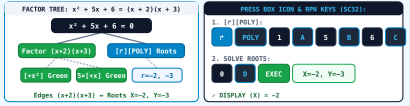
L-RAIL FACTORING FRAME ↔ BOX [↱][POLY] SOLVER ICON

STEP A: HANDS-ON WITH TILES IN L-RAILS — 1:1 CAD SCENE

Top Rail	Left Rail	Box Icon Key
Reads Width (x + 3)	Reads Height (x + 2)	[↱][POLY] Roots −2, −3

▲ **Snap the two Gray L-Rails together at 90° and pack your tiles** inside—then verify roots with [↱][POLY]!

EQN — STEP B: TRY IT ON YOUR CALCULATOR — BOX ICON: [↱][EQN] & [↱][POL



KEYSTROKES: [↱] [POLY] 1 [A] 5 [B] 6 [C] 0 [D] [EXEC] [RCL] 1 [RCL] 3
Press [↱][POLY] (the equation icon on your box!) to verify roots −2 and −3 of (x+2)(x+3)!

WELCOME TO HANDS-ON MATH • KEEP THIS GUIDE IN YOUR BOX LID

STEP 1: UNFOLD RIGHT → PAGE 02

HOW IT WORKS: THE CORE IDEA

Area = Length × Width: Factoring Is Just Building a Rectangle

POLYNOMIALS AS GEOMETRIC PUZZLES

When you multiply two binomials on paper (FOIL), you get four parts:
$(x + a)(x + b) = x^2 + ax + bx + ab$

Our Algebra Tiles turn those four parts into a literal rectangle: every piece has a real physical area:

- **Area of x^2 square = x × x**
- **Area of x rod = x × 1**
- **Area of unit tile = 1 × 1**

Factoring is just playing in reverse: grab the tiles for an expression, pack them into a solid rectangle, and read the side lengths!

WHY THE 'X' ROD HAS SMOOTH UNMARKED SIDES

Because x is a variable that can stand for any number, the x rod is smooth with no unit tick marks on its face – reminding your brain that x is an unknown variable length, while the 1-tiles are fixed constants.

THE ZERO-PAIR SUPERPOWER (+x AND −x = 0)

Place any positive tile next to its negative twin: (+x) + (−x) = 0, and (+1) + (−1) = 0! Adding a zero-pair doesn't change the total value, but it gives you the missing pieces needed to complete a rectangle.

3 CLASSIC MATH TRAPS THIS KIT MAKES IMPOSSIBLE VISUAL PROOF

✗ **TRAP 1 – Writing $(x + 3)^2 = x^2 + 9$:**
✓ **FIX:** Build an (x+3)×(x+3) square in the rails—you immediately see the six Green [+x] wing rods you forgot!

✗ **TRAP 2 – Combining x^2 and x into '$2x^3$':**
✓ **FIX:** A 38.6×38.6mm [$+x^2$] square and a 38.6×19.0mm [+x] rod have different dimensions and cannot merge.

✗ **TRAP 3 – Guessing signs when factoring:**
✓ **FIX:** Purple/Red negative tiles (−x, −1) and Green/Yellow positive tiles (+x, +1) make zero-pairs visible.

CALCULATOR CHECK: [↱] [POLY] 1 [A] 5 [B] 6 [C] 0 [D] [EXEC] [RCL] 1 [RCL] → X = −2

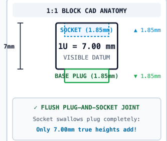
TILE DIMENSIONS & COLOR GUIDE

COMPONENT	DIMENSIONS	VALUE	COLOR
Quadratic ($+x^2$)	38.6 × 38.6 mm	$+x^2$	Green
Quadratic ($-x^2$)	38.6 × 38.6 mm	$-x^2$	Purple
Linear Rod (+x)	38.6 × 19.0 mm	+x	Green
Linear Rod (−x)	38.6 × 19.0 mm	−x	Purple
Unit Block (+1)	19.0 × 19.0 mm	+1	Yellow
Unit Block (−1)	19.0 × 19.0 mm	−1	Red
Corner L-Rails	123.0 × 19.9 mm	Guides	Gray
3x1 Storage Bin	126 × 42 × 49 mm	3x1x7U	Black

WHY YOUR BRAIN LOVES THIS

- Self-Checking Geometry: If your tiles form a solid rectangle with no missing corners or leftover pieces, your factoring is 100% correct!
- Custom Recessed Bays: Every tile has a home so cleanup takes 15 seconds.

1:1 CAD REFERENCE VIEW



✓ FLUSH PLUG-AND-SOCKET JOINT
Socket swallows plug completely:
Only 7.00mm true heights add!

BOX ICON & FORMULA QUICK-REFERENCE

Box Button Icon Key:
[↱][EQN] & [↱][POLY] Polynomial Solver

Rectangle Area Law:
Area = Width × Height = $ax^2 + bx + c$

Zero-Pair Identity:
[+x] + [−x] = 0 and [+1] + [−1] = 0

Complete the Square:
Split b rods in half → add $(b/2)^2$ units

SC-32 Quadratic Roots:
[↱][POLY] a[A] b[B] c[C] 0[D] [EXEC]

GEOMETRIC ALGEBRA • EVERY TRINOMIAL IS A RECTANGLE PUZZLE

STEP 2: UNFOLD DOWN ▼ PAGES 03–04

▲ FOLD 1: FOLD BOTTOM HALF BEHIND TOP ▲

▼ UNFOLD STEP 2: OPEN DOWN FOR PAGES 03 & 04 ▼

EXAMPLE 1: HANDS-ON WALKTHROUGH

Build $(x + 2)(x + 3) = x^2 + 5x + 6$ Inside the Corner Rails

① DEPLOY RAILS & MODEL TRINOMIALS

GOAL: Factor the quadratic expression $x^2 + 5x + 6$

1. DEPLOY THE FACTORING CORNER RAILS:
Lock the two L-rails together on your desk. The inside corner establishes the Cartesian origin (0, 0).

2. GATHER THE POLYNOMIAL TILES:
Take one $+x^2$ tile, five +x linear rods, and six +1 unit squares.

3. ARRANGE INTO A SOLID RECTANGLE:

- Seat the $+x^2$ tile flush against the corner origin.
- Place three +x rods horizontally along the bottom rail.
- Place two +x rods vertically along the side rail.
- Fill the remaining corner void with the six +1 unit tiles!

READ FACTORS DIRECTLY FROM OUTER EDGES

Look at the outer dimensions of your completed rectangle:

- **Horizontal Width: One x length + three unit widths = (x + 3)**
- **Vertical Height: One x length + two unit heights = (x + 2)**

✓ **Physical Factoring: $x^2 + 5x + 6 = (x + 2)(x + 3)$**

EQN — STEP B: TRY EXAMPLE #1 ON YOUR CALCULATOR — [↱][EQN] & [↱][POL

STEP 1 (BUILD RECTANGLE):
Pack 1×[$+x^2$], 5×[+x], and 6×[+1] inside the Gray L-Rails to form edges (x + 2) and (x + 3).

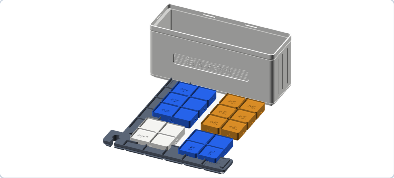
STEP 2 (EVALUATE AT x=4):
Press 4 [ENTER] 2 [+] (= 6) then 4 [ENTER] 3 [+] (= 7) and [×] → X = 42 (matches $4^2+5(4)+6$!).

STEP 3 (SOLVE WITH [↱][POLY]):
Press [↱][POLY] 1 [A] 5 [B] 6 [C] 0 [D] [EXEC] [RCL] 1 [RCL] 3 → Y = −3, X = −2!

LIVE 4-REGISTER RPN STACK READOUT (AFTER KEYSTROKES):
T: 0 | Z: 0 | Y: 0 | X: 42 → DISPLAY (X) = 42

LESSON 1: (x+2)(x+3) RECTANGLE ↔ RPN AREA EVALUATION

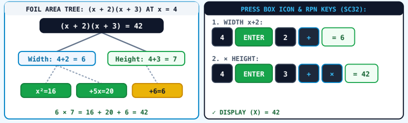
STEP A: HANDS-ON WITH TILES IN L-RAILS — 1:1 CAD SCENE



Corner [$+x^2$] Green	Five [+x] Green	Six [+1] Yellow
38.6 × 38.6 mm	38.6 × 19.0 mm	19.0 × 19.0 mm

▲ **Slide $+x^2$, five +x rods, and six +1 units tightly into the** L-Rails: the outer edges read (x + 2) by (x + 3)!

EQN — STEP B: TRY IT ON YOUR CALCULATOR — BOX ICON: [↱][EQN] & [↱][POL



KEYSTROKES: 4 [ENTER] 2 [+] 4 [ENTER] 3 [+] [×]
Build the (x+2)(x+3) rectangle in the L-Rails, then test x=4 on the RPN stack: 6 × 7 = 42!
✓ **4-REGISTER STACK: T: 0 | Z: 0 | Y: 0 | X: 42 → X = 42**

READ FACTORS ON THE RAILS • OUTER EDGES REVEAL (x + a)(x + b)

CONTINUE RIGHT → PAGE 04

EXAMPLE 2: THE "AHA!" DISCOVERY

Zero-Pair Magic: Factoring $x^2 - 4$ (Difference of Squares)

② ZERO-PAIR ANNIHILATION: FACTOR $x^2 - 4$

THE PUZZLE: How do you build a rectangle with x^2 and −4?
If you place $+x^2$ and four −1 tiles, there is a giant corner gap. You cannot form a rectangle without adding linear rods!

THE ZERO-PAIR BREAKTHROUGH:

- Add two positive +x rods AND two negative −x rods.

(+2x) + (−2x) = 0 (The total value of the expression is unchanged!)

- Place the two +x rods along the horizontal base.
- Place the two −x rods along the vertical side.
- Fill the remaining corner with four red −1 unit tiles!

(+2) × (−2) = −4 (Matches the constant term perfectly!)

✓ DIFFERENCE OF SQUARES PHYSICAL THEOREM

$$x^2 - a^2 = (x + a)(x - a)$$

$$x^2 - 4 = (x + 2)(x - 2)$$

The outer rail lengths now read (x + 2) and (x − 2) directly.
The positive and negative linear terms cancel out in the middle!

AHA! DISCOVERY MOMENT

Students physically witness zero-pairs in action. Annihilation is not just an abstract symbol manipulation; it is a physical symmetry that completes geometric shapes!

★ 2-PLAYER GAME: 'SECRET RECTANGLE PUZZLE' (2 MINS)

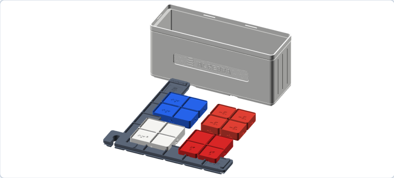
Player A picks a factor pair (like (x+3)(x−1)), expands it, and hands the simplified pile of tiles (1×[$+x^2$], 2×[+x], 3×[−1]) to Player B. Player B must add zero-pairs ([+x]+[−x]) until all tiles **pack into a tight rectangle inside the L-Rails, then verify roots with [↱][POLY]!**

⚙ WHERE THIS SHOWS UP IN ARCHITECTURE, GRAPHICS & AI

Every time al-Khwarizmi solved an equation in 820 AD, he literally 'completed the square' by moving rectangular strips around a square! Today, parabolic trajectories in physics and polynomial **splines in 3D animation use this exact root-and-area geometry.**

LESSON 2: DIFFERENCE OF SQUARES (x^2-4) ↔ [↱][POLY]

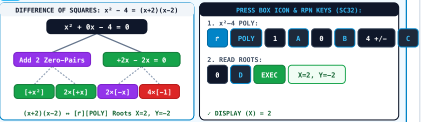
STEP A: HANDS-ON WITH TILES IN L-RAILS — 1:1 CAD SCENE



Top-Left: [$+x^2$]	Wings: +2x & −2x	Corner: 4×[−1]
38.6 × 38.6 mm	Zero-Pair Cancel	$x^2 - 4 = (x+2)(x-2)$

▲ **Adding two (+x, −x) zero-pairs completes the (x+2)(x−2)** rectangle and reveals roots x = +2 and x = −2!

EQN — STEP B: TRY IT ON YOUR CALCULATOR — BOX ICON: [↱][EQN] & [↱][POL



KEYSTROKES: [↱] [POLY] 1 [A] 0 [B] 4 [+/−] [C] 0 [D] [EXEC] [RCL] 1 [R
Adding two [+x]/[−x] zero-pairs completes (x+2)(x−2) and matches [↱][POLY] roots X=2, Y=−2!
✓ **4-REGISTER STACK: T: −2 | Z: 0 | Y: −2 | X: 2 → X = 2**

ZERO-PAIR SYMMETRY • WHY (+x) AND (−x) CANCEL IN MID-AIR

STEP 3: FLIP SHEET OVER ↻ PAGE 05

◀ PAGE 03 (LEFT) → PAGE 04 (RIGHT) • THEN FLIP SHEET OVER FOR PAGES 05–08 ▶

◀ PAGE 05 (CHALLENGES) → PAGE 06 (HOW TO STACK BLOCKS BACK IN) ▶

EXAMPLE 3 & DESK CHALLENGES

Factoring Trinomials: $x^2 + 5x + 6$ + 3 Desk Challenges

③ FACTORING TRINOMIALS: $x^2 + 5x + 6 = (x + 2)(x + 3)$

THE GOAL: Factor $x^2 + 5x + 6$ into a solid rectangle using the corner rails!

1. SEAT [+x²] AT THE ORIGIN:
Place the large green quadratic square tile at the intersection of the two L-rails.

2. SPLIT FIVE [+x] RODS (2 & 3):
Place two green linear rods vertically and three green rods horizontally along rails.

3. FILL SIX [+1] UNITS:
Drop six yellow constant squares into the 2 × 3 corner to complete the rectangle.

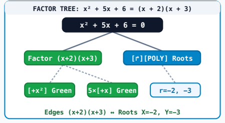
✓ READ BINOMIAL FACTORS DIRECTLY OFF THE RAILS

The outer horizontal rail length is $(x + 3)$; the vertical rail length is $(x + 2)$.
Area = Length × Width: $x^2 + 5x + 6 = (x + 2)(x + 3)$ with zero pencil guessing!
Roots are where factors equal zero: $x + 2 = 0 \rightarrow x = -2$, and $x + 3 = 0 \rightarrow x = -3$.
Verify on calculator: [↱][POLY] 1 [A] 5 [B] 6 [C] [EXEC] finds roots x = −2, −3!

PRO TIP: CLOSE YOUR EYES & FEEL THE ANSWER
Once you build an example, run your fingers across the pieces. Your hands remember physical shapes and heights way longer than memorized rules!

EXAMPLE 3: VISUAL DECOMPOSITION TREE

FACTOR TREE: $x^2 + 5x + 6 = (x + 2)(x + 3)$



STEP B: PRESS BOX ICON & RPN KEYS (SC32)

TACTILE KEYSTROKE WALKTHROUGH:

1. [↱][POLY]: ↱ POLY 1 A 5 B 6 C
2. SOLVE ROOTS: 0 D EXEC X=−2, Y=−3

✓ CALCULATOR DISPLAY (X) = −2

EQN **FULL KEYSTROKES: [↱] [POLY] 1 [A] 5 [B] 6 [C] 0 [D] [EXEC] [RCL] 1 [RCL] 3**

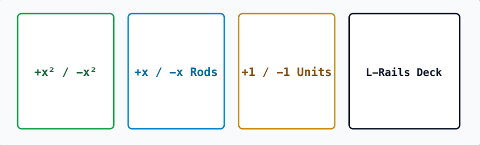
HOW TO STACK IT ALL BACK IN

The 10-Second Self-Checking Pack-Up Puzzle

TOP-DOWN BOX MAP: WHERE EVERY PIECE LIVES

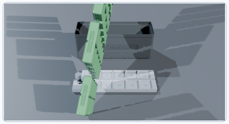
Putting the blocks away is a 10-second puzzle. Match each piece to its labeled home bay below so everything nests flush and the lid snaps shut:



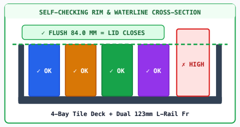
✓ CUSTOM-SHAPED BAYS FOR EVERY TILE TYPE

The box is divided into four dedicated bays: Quadratic Squares (+x²/−x²), Linear Rods (+x/−x), Unit Constants (+1/−1), and the two Corner L-Rails. When all 30 tiles and 2 rails are stacked in their matching bays, the top surface sits completely flat so the lid clicks shut with zero rattle.

1. STORAGE CASE & COMPARTMENTS



2. WHY THE LID SELF-CHECKS EVERY PIECE



SELF-CHECKING RIM & WATERLINE CROSS-SECTION

✓ OK
✓ OK
✓ OK
✓ OK
✗ HIGH
4-Bay Tile Deck + Dual 123mm L-Rail Fr

▲ SELF-INDEXING BAYS & EMBOSSED BOX BUTTON ICON:
Calibrated bays guide every piece home, and the lid icon links directly to your calculator.

THE 10-SECOND PACK-UP ROUTINE

HOW TO STACK EVERYTHING BACK IN:

1. SORT BY COLOR & NUMBER:
Group matching blocks or tiles together on your desk first.

2. STACK & DROP INTO LABELED BAYS:
Follow the Top-Down Box Map on the left. If a tower looks too tall or too short, a block is in the wrong bay—swap it until everything levels!

3. TUCK THIS CARD IN THE LID & SNAP SHUT:
Fold this guide back to [01] and rest it right on top before closing.

CORNER L-RAILS & STAGE LID

- Place the two L-Rails on your desk to form a 90° factoring frame for any rectangle.
- Why doesn't [+x] equal a whole number of [+1] tiles? So you never confuse x with a fixed constant!
- Easy care: wipe clean with a damp cloth or lukewarm soapy water.

SHORT A PIECE AT CLEAN-UP TIME?
First check under notebooks and chair legs! If a piece truly vanished, **see PAGE 08 (bottom-right) for your complete Part ID Reference Table.**

✓ ALGB-01 4-POINT CLEAN-UP CHECKLIST

1. SORT 4 TILE BAYS:	Stack +x²/−x² (38.6mm), +x/−x (38.6×19mm), and +1/−1 (19mm) in their bays.
2. SEAT L-RAILS:	Nest both Gray Corner L-Rails (123.0 mm) flat along the side rail deck.
3. FOLD CARD TO [01]:	Fold this reference booklet to Panel [01] and lay inside the lid.
4. SNAP LID FLUSH:	Close the 3×1 box lid—all 34 pieces lock with zero rattle!

MODULAR CLASSROOM & BOOKSHELF NESTING (42.0 MM PITCH)
Every StackCalc box is sized in exact multiples of 42.0 mm (1×1, 3×1, 3×2). All 9 kit boxes interlock side-by-side in a classroom cart or drawer with zero wasted space, and every embossed box icon matches its calculator operation key!

CUSTOM TILE BAYS • LID ONLY SLIDES SHUT WHEN ALL 34 PIECES ARE HOME

▲ BOX ICON ↔ CALCULATOR KEY CONTINUITY:
Every physical box lid carries the exact icon of the calculator key that computes that lesson!

HOW BLOCKS CONNECT TO THE CALCULATOR

SHARED MODULAR FOOTPRINT & HEIGHTS
- Constant [+1] tiles (19.0 × 19.0 mm) match the universal StackCalc grid footprint.
- Recessed sockets swallow the bottom peg so only true heights add.
- All storage boxes nest neatly side-by-side on any desk or shelf.

WHY WE CALL IT "STACKCALC" (THE RPN SECRET)
- Bridges physical factoring to the SC-32 calculator: test any root x by evaluating on the RPN stack.
- Placing a block on the table = pressing [ENTER] to push onto the stack.
- Snapping two towers together = pressing [+] or [×] with zero parentheses!
- Mirrors the 4 stack levels on the SC-32 calculator: X, Y, Z, and T.

FREE ACTIVITY DECKS & INTERACTIVE SIMULATORS
Download extra printable puzzle cards, teacher lesson guides, and interactive browser simulations anytime—no login needed.
