MATHEMATICS / MIDDLE SCHOOL WORKBOOK

Why solve a problem only one way when two textbook methods make it unforgettable?

Middle school is the bridge between elementary arithmetic and high school algebra. When students solve every section using two independent textbook methods on paper first—reinforced with physical math blocks and verified step-by-step on the StackCalc SC-6 stack—ratios, fractions, integers, equations, geometry, and statistics lock into place.

Aligned section-by-section to Big Ideas Math Middle School (Grades 6–8) with full CCSS, Texas TEKS, and Florida B.E.S.T. crosswalks, this 100% self-contained workbook delivers 45 core sections, 90 Practice A & B worksheets (900 problems), 10 End-of-Unit Mastery Quizzes, complete self-check answer keys, and 3D Block Studio & SC-6 Reference Guides.

Inside the Workbook: 10 Units & 45 Sections • 90 Practice A & B Worksheets (900 problems) • 10 End-of-Unit Mastery Quizzes (100 items) • Answer Keys, Standards Crosswalk & 3D Block Studio Guides.
