GUIDING INQUIRY

Where does the first number wait safely on the stack while you are entering the second number?

① STEP 1: ENTER 3 AND 4 ONTO STACK

Power on the SC-32. Key: 3 [ENTER] 4 [ENTER].
Stack state: Register Y holds 3.0000; Register X holds 4.0000.
In RPN, numbers always enter before operators!

② STEP 2: SQUARE BOTH REGISTERS

Press [▔] [x²] on 4: Register X becomes 16.0000.
Press swap [x⇄y]: Register X becomes 3.0000; Y holds 16.0000.
Press [▔] [x²] on 3: Register X becomes 9.0000.

③-④ STEPS 3 & 4: COLLAPSE STACK & SQRT

3. ADD SQUARES: Press [+]. The stack drops: 16.0000 + 9.0000 = 25.0000 in X!
4. SQUARE ROOT: Press [√x]. Result: 5.0000!
Combined Keystrokes: 3 [▔] [x²] 4 [▔] [x²] [+] [√x] → 5.

⑤ CORE PRINCIPLE: THE FREEDOM FROM PARENTHESES

Evaluating $\sqrt{(3^2 + 4^2)}$ in traditional algebraic mode requires nested parentheses. In RPN, you calculate from the inside out, exactly as you think! Intermediate numbers sit patiently on the stack until an operator consumes them. Zero parentheses, zero syntax errors!

★ EXTENSION INVESTIGATION: KINETIC ENERGY: $E = \frac{1}{2} m v^2$

Calculate kinetic energy for mass m=12 and velocity v=5: 0.5 [ENTER] 12 [×] 5 [▔] [x²] [×]
→ 150.0000! Zero parentheses! (Scan QR for 3D animated solution!)

→ Assemble with physical blocks, then scan QR code for 3D animated solution.
